**Abstract** The purpose of this study was to determine whether the use of a computer-based program could improve the accuracy of the measurement of intraocular pressure (IOP) by Goldmann field perimeter (GFP). A total of 60 eyes were measured by GFP and IOPmaster (IOPmaster; Colson, Inc., Allentown, PA), which is a computerized perimeter. The mean difference between the two measurements was 0.7 mmHg. The standard deviation of the difference was 1.8 mmHg. The correlation coefficient was 0.96. The results indicate that the use of IOPmaster can significantly reduce the variability of IOP measurement compared with GFP.
